

SCANEX UPDATE

get more out of your plant.

Dear customers,

we constantly revise and update our product portfolio to ensure that it meets the latest technical developments and offers best-practice-solutions. End of 2019 we completely upgraded our kiln monitoring solution SCANEX®.

The **new SCANEX-IC** is based on rugged and industrially-tested infrared cameras which operate without any moving parts. This offers considerable advantages with regards to maintenance and availability, but also for size and positioning flexibility of the cameras.

The new Scanex offers a higher accuracy, paired with reliability, overall improved hardware, and many more features.

Today we would like to inform you that, effective immediately, we cancel spare parts delivery and service offerings for old Scanex systems that work with mirror-controlled infrared sensors. To further ensure the monitoring of your kiln, we suggest to upgrade your Scanex system. To thank existing clients for their trust, we offer attractive special conditions for our new Scanex-IC. This offer is valid until **March 31, 2021**.
